

# Optimization of Care

The Children's Center Rehabilitation Hospital offers 24-hour medical care, comprehensive rehabilitative therapies, respiratory care, and special education.

The short-term evaluation program offers a comprehensive approach designed to optimize care needs for children living at home. This 60-day inpatient program is designed for children birth to 18 years of age who have complex medical needs as a consequence of birth defects and/or complications, traumatic accidents, or significant illnesses. During admission to the Hospital, children receive a variety of services and evaluations individualized for each patient.

Assisting families with their challenges and questions is a significant part of our work. Parents are considered an essential part of the treatment team.
